Application/Control Number: 09/697,941

Art Unit: 2858

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claims 1-2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 1-2, it is unclear what "a digital control structure" represents. Is it shown in any of drawings?

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Applicants' admitted prior art figure # 2.

As to claim 1, prior art figure # 2 shows an electronic circuit having a first node (input pad D2), a second node (output pad B2) and a digital control structure (functional core logic). It would have been obvious that if a signal applied or received at a first node, the control structure would transmit that signal to the second node.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Application/Control Number: 09/697,941

Art Unit: 2858

Page 3

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by a conventional 5. diode.

As to claims 1-2, a conventional diode would include a first node or terminal and a second node or terminal. When a sufficient voltage is applied to the first node of the diode, the diode starts to conduct and the second node is in activate stage. Furthermore, the diode is qualified as "a digital control structure".

The prior art made of record and not relied upon is considered pertinent to applicant's 6. disclosure.

Rostoker et al (Pat # 5,442,282) disclose testing and excersing individual unsingulated dies on a wafer.

Any inquiry concerning this communication or earlier communications from the examiner 7. should be directed to VINH P. NGUYEN whose telephone number is (703) 305-4914.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 305-4900.
